

Capturing Video With Your Mobile Phone

Go to your camera on your phone

Go to settings and switch to video camera (could be slightly different depending on make and model)

Make sure the video settings are as high as possible.

Ensure Sound is enabled

When shooting your video you need to shoot one continuous take for the whole music video. If you do mess-up or are not happy with the result you can re-shoot the entire take.

You can bring as many different takes as you want to see which one works the best but we can not edit the video (we can trim the start and end but this is all the editing we can do)
